In the Claims:

Please delete claims 1-20 without prejudice to the subject matter claimed therein.

Please add the following new claims:

Sub
B1

21. (new) A cap for a writing instrument, the cap comprising a first end having a first aperture for receiving the writing instrument and a second end having a second aperture and a retractable tip disposed therein.

22. (new) The cap of claim 21, wherein the retractable tip is dimensioned for interacting with a touch sensitive display.

23. (new) The cap of claim 21, wherein the retractable tip is fabricated from rubber.

24. (new) The cap of claim 21, wherein the cap is dimensioned to closely conform to a first end and a second end of the writing instrument, wherein the first end and or the second end of the writing instrument cooperate with the cap to cause the retractable tip to extend outwardly from the second aperture defined in the cap.

25. (new) The cap of claim 24, wherein the writing instrument is a pen.

Sub
B2

26. (new) A writing instrument for alternatively writing on a surface and for interfacing with a touch sensitive display, the writing instrument comprising:

an elongated body having a first end having a writing tip and a second end; and

a cap having a first end having a first aperture with a retractable non-writing tip mounted therein and a second end having a second aperture, the second aperture being dimensioned to operatively connect the cap to the first end and the second end of the writing instrument, wherein the first end and or the second end of the writing instrument cooperate with the cap to extend the non-writing tip outwardly from the second aperture.

27. (new) The writing instrument of claim 26, wherein the non-writing tip is dimensioned for interacting with a touch sensitive display.

28. (new) The writing instrument of claim 26, wherein the non-writing tip is fabricated from rubber.

Sub B3
29. (new) The writing instrument of claim 26, further comprising a source for generating a signal for remotely communicating with the personal digital device.

30. (new) The writing instrument of claim 29 further comprising a micro-switch for coupling the source for generating a signal to the writing tip.

31. (new) The writing instrument of claim 26 further comprising an ink supply positioned in the elongated body.

a2
32. (new) The writing instrument of claim 29, wherein the source includes an electromechanical transmitter.

Sub B4
33. (new) A cap for an instrument, the cap comprising:
a first end having a first aperture for operatively connecting to the instrument;
a second end having a second aperture, the second aperture having a retractable tip mounted therein; and
means for actuating the retractable tip through the second aperture.

34. (new) The cap of claim 33, wherein the retractable tip is dimensioned for interfacing with a touch sensitive display.

35. (new) The cap of claim 34, wherein the retractable tip is fabricated from rubber.
